## PROFESSIONAL SUMMARY

---

Data Engineer with 3+ years building ETL/ELT pipelines, analytics architecture, and end-to-end automation in high-volume logistics and agribusiness environments. Cut data processing time by up to 40% and dashboard load time from 8 hours to 15 minutes. Experience applying generative AI (OpenAI API) to operational decision workflows, query optimization across PostgreSQL, SQL Server and MySQL, and workflow orchestration with n8n and Power Automate. Combines strong technical depth with a clear read on financial and operational impact, turning data into business decisions.

## PROFESSIONAL EXPERIENCE

---

### Data Analyst / Data Engineer — Princesa dos Campos

Oct 2025 – Present

- ▶ Built an automated n8n workflow integrated with the OpenAI API for daily collection, curation and strategic pre-analysis of logistics data, with an automated executive report sent to the management group via WhatsApp — cut manual triage time and sped up decision-making by up to 50% during the first hours of the day.
- ▶ Developed ETL/ELT pipelines in Python and SQL for logistics data flows, reducing data processing and availability time by approximately 40%.
- ▶ Optimized queries in PostgreSQL and Progress, improving strategic report performance by up to 60%.
- ▶ Built an internal system for automatic identification of the nearest response point (distance and proximity logic), reducing average incident response time by 25–35%.
- ▶ Structured logistics KPI dashboards (transfers, incidents, route performance and risk indicators), cutting operational analysis time from hours to minutes and improving decision-making efficiency by 15–20%.
- ▶ Automated processes with Power Automate (RPA, job scheduling, report distribution), reducing recurring manual tasks by approximately 50%.
- ▶ Worked strategically on risk management (GRIS), integrating tracking and incident data to increase visibility into operational risk and reduce rework and losses.
- ▶ Implemented data cleaning, standardization and audit routines, increasing the reliability of information used by operations.
- ▶ Orchestrated integrations across n8n, APIs and messaging systems, expanding automation and integration between corporate systems.

### Data Analyst — Schoeler Agro

Feb 2025 – Oct 2025

- ▶ Restructured the reporting update architecture, migrating to Power BI Service (Dataflows Gen1) via AWS, cutting dashboard load time from approximately 8 hours to 15 minutes on datasets with millions of rows.
- ▶ Developed a BI solution for swine feed conversion analysis, supporting cost and feed formulation decisions by correlating protein levels with conversion rates — guiding supplier selection and input cost optimization.
- ▶ Built and maintained ETL/ELT pipelines integrating a Data Warehouse, MySQL (ODBC) and SQL Server, ensuring structured updates and greater analytical stability.
- ▶ Created strategic and operational Power BI dashboards for production, animal nutrition, procurement and management.
- ▶ Structured and tracked productivity and financial KPIs, improving management analysis efficiency by 15–20%.
- ▶ Administered SQL Server, MySQL and Azure databases, applying governance, data integrity and information security practices.

### IT Teacher — Núcleo Regional de Educação PR

Feb 2024 – Feb 2025

- ▶ Taught courses in the Systems Development technical program (Databases, Mobile Programming, Computer Graphics, Systems Analysis and Design).
- ▶ Applied active learning methodologies and hands-on projects, preparing students for real challenges in the IT job market.

- ▶ Provided technical support for the installation and maintenance of internal software and systems, and supported the organization of administrative processes across departments.

SKILLS / STACK / TOOLS

---

**BI & Data Visualization:** Power BI, Excel, interactive dashboards, Data Visualization, KPIs, Data Storytelling

**Databases / SQL:** SQL Server, MySQL, PostgreSQL, Progress, Data Warehouse, Data Modeling, Advanced SQL, ODBC, On-Premises Gateway

**ETL / ELT / Governance:** Data Pipelines, Data Quality, Data Auditing & Governance, RPA, Power Automate, n8n, API Integration

**Programming:** Python, SQL, Data Structures, Automated Scripts, Systems Integration

**Systems & Security:** ERP, CRM, Logistics Systems, pfSense, Access Control, Information Security

**Methodologies:** Scrum, Kanban, Project Management, Data-Driven Decision Making, Continuous Improvement

EDUCATION

---

|                                                                                                |                     |
|------------------------------------------------------------------------------------------------|---------------------|
| Master's in Computer Science — UTFPR                                                           | Mar 2026 – Dec 2027 |
| B.Sc. in Software Engineering — UniCesumar                                                     | Feb 2022 – Dec 2025 |
| A.S. in Systems Analysis and Development — UniCesumar                                          | Jul 2022 – Dec 2024 |
| MBA in Technology for Business: AI, Data Science & Big Data — Faculdade Líbano                 | Jul 2025 – Feb 2026 |
| Postgraduate Certificate in Technology & Innovation Applied to Agribusiness — Faculdade Líbano | Jul 2025 – Feb 2026 |

EXTRACURRICULAR ACTIVITIES

---

- ▶ Board Member, Software Engineering — CREA-JR: organized talks, technical workshops and discussions on innovation and technology.
- ▶ Participated in interdisciplinary research projects applying technology to Education, Healthcare and Engineering.
- ▶ As a teacher, developed educational projects integrating active learning methodologies and the use of AI in education.
